In cardiovascular physiology, stroke volume (SV) is the volume of blood pumped from the left ventricle per beat. Stroke volume is calculated using measurements of ventricle volumes from an echocardiogram and subtracting the volume of the blood in the ventricle at the end of a beat (called end-systolic volume) from the volume of blood just prior to the beat (called end-diastolic volume).

Stroke volume - Wikipedia

In the pacemaking cells of the heart (e.g., the sinoatrial node), the pacemaker potential (also called the pacemaker current) is the slow, positive increase in voltage across the cell's membrane (the membrane potential) that occurs between the end of one action potential and the beginning of the next action potential. This increase in membrane potential is what causes the cell membrane, which ...

Calcolo del volume sistolico. Il valore si ottiene sottraendo il volume telesistolico (end-systolic volume, ESV), dal volume telediastolico (end-diastolic volume, EDV) del ventricolo esaminato. = – In un uomo sano di 70 kg il volume telediastolico è circa 120 mL e il volume telesistolico è circa 50 mL, con una differenza di 70 mL che corrisponde al volume sistolico.

Volume sistolico - Wikipedia

Hypertension is the most common primary diagnosis in the United States, [] and it is one of the most common worldwide diseases afflicting humans and is a major risk factor for stroke, myocardial infarction, vascular disease, and chronic kidney disease. Despite extensive research over the past several decades, the etiology of most cases of adult hypertension is still unknown, and control of ...

Hypertension: Practice Essentials, Background, Pathophysiology

If urinary potassium exceeds 30 mmol/L, the patient should have plasma renin activity measured. If the PRA is high, the likely cause is estrogen therapy, renovascular hypertension, malignant hypertension, or salt-wasting renal disease (or blockade of the renin-angiotensin system—the far more common reason).

loss of consciousness and pressure to the neck . Swann & Brucer (1949) – dogs survived seven to fourteen minutes of obstructive asphyxiation, and it was shown that there was a raised partial pressure of carbon dioxide, then reduced heart rate, followed by a terminal tachycardia and abrupt cardiac failure.

pressure to the neck :: www.forensicmed.co.uk

The gastrointestinal (GI) tract is innervated by intrinsic enteric neurons and by extrinsic efferent and afferent nerves. The enteric (intrinsic) nervous system (ENS) in most regions of the gut consists of two main ganglionated layers; myenteric and submucosal ganglia, containing numerous types of enteric neurons and glial cells.

Development of the intrinsic and extrinsic innervation of ...

Zdravo srce je teško oko 0,5 % ukupne telesne masa ili u proseku od 250 do 350 grama. Težina srca varira od osobe do osobe, i u muškarca je od 280 do 340 grama, a u žena od 230 do 280 grama.. Nakon rođenja zajedno sa ostalim organima srce nastavlja da raste u veličini i težini sve do kraja perioda rasta, što je rast srca više izražen kod muškaraca nego kod žena.

A ugust Krogh, dopo molti anni di studio, ha trovato che i capillari sono dilatati o contratti a seconda della quantità di sangue necessaria del tessuto. Ha inoltre condotto ricerche sulla respirazione cellulare e sul sistema circolatorio ed inventato un microtonometro per misurare la tensione di ossigeno e anidride carbonica nel sangue arterioso.
