Finding textual data in a database is a very common scenario in applications. Several full-text-based products are available for IBM® DB2® Universal Database™, including DB2 Text Information Extender and the DB2 Net Search Extender. However, DB2 Extenders® do not include the functionality to perform regular expression matching, which is used to find and replace patterns in a string.

Note: SQL/XML is completely different from Microsoft's SQLXML, a proprietary technology used in SQL Server. The similarity in names has caused a great deal of confusion in the industry. XQuery is a completely new query language that uses XML as the basis for its data model and type system. It is being developed in the XML Query Working Group, which is a part of the World Wide Web Consortium.
